

NATURE AND BIODIVERSITY

at Camiral Golf & Wellness

For years, at Camiral, we have focused on preserving and promoting the biodiversity of the environment in which we live, boosting natural ecosystems and promoting activities for well-being and to provide a more sustainable life. All of this was recognised in 2020 through the *IAGTO Award for Sustainability for the Protection of Nature*, which is part of the **IAGTO Awards** and **recognises excellence in environmental and social responsibility**.

Our experts in ecology from the association for the Conservation of Natural Ecosystems thoroughly work to preserve and improve the biodiversity of the resort through a wide range of conservation actions and environmental education and awareness activities.

We want each of our residents to participate in our commitment to preserve biodiversity at Camiral and become a world reference by making a golf resort act as a natural reserve.

at Camiral Golf & Wellness

NEST BOXES

Among the actions carried out by the association for the Conservation of Natural Ecosystems are the placing of nest boxes throughout the resort that help us to shelter many native species that are key to the proper functioning of ecosystems, including feeding on insects, worms and rodents. Below, you can see different options of nest boxes and insect repellent plants, such as flies and mosquitoes, that our biologists may place in your garden. In addition, you will enhance biodiversity too.

01 Green Woodpecker, Hoopoe, Scops Owl

There are some of the key species for the resort as they help prevent and deter pests in the playing area of the golf courses by feeding on the caterpillars and larvae.

€128 VAT incl.

Dimensions
45 x 18 x 19 cm

02 Eurasian Scops Owl, Common Barn Owl

These nocturnal birds feed on rodents at night.

€128 VAT incl.

Dimensions
45 x 18 x 19 cm

€189 VAT incl.

Dimensions
62 x 41 x 32 cm

03 Tits

These birds will seek refuge in this nest box from where they will hang from the tree branches to feed on the mosquitoes that hide among the leaves.

€99 VAT incl.

Dimensions
22 x 14,5 x 20 cm

04 Bats

One of the most popular night mammals that also feeds on thousands of mosquitoes and other insects overnight.

€99 VAT incl.

Dimensions
38 x 15 x 21 cm

€108 VAT incl.

Dimensions
20 x 40 x 5 cm

PLANTS

All these native plants have in common that they act as repellents for insects, mainly flies and mosquitoes. In addition, they are also part of the natural habitats of the region and, therefore, contribute to enhance biodiversity and beauty.

Lemon bee brush

Lemon thyme

Rue

Lemon geranium

Citronella

Rosemary

Sage

Basil

€8 VAT incl.

(without planting - check availability and price for planting)

Ask our biologists to help you create a custom package that combines nest boxes and plants to naturally reduce insects, grass caterpillars, and rodents—contributing to the preservation of the resort's overall biodiversity.

Buy your nests, plants or packages at Residents Club or residentservices@camiral.com
